

Sage External Acoustic Microphone

The Sage External Acoustic Microphone installs easily onto the Sage High Pressure 5,000 psi Gas Gun, or the Sage remote-fire gas guns, via a threaded connection. The external microphone attaches the gas gun to the Acoustic Fluid Logger III or IV via a microphone cable connection.

Stainless steel construction makes the Sage External Acoustic Microphone rugged and dependable, while the internal microphone crystal offers high sensitivity to the acoustic signal needed for fluid level testing on oil and gas wells.

Sage External Acoustic Microphone installed on the Sage Two-Way Valve Remote fire gas gun.
